

LACUNA URBAN®

THE NEW INWARD-OPENING FOLDING DOOR FROM LACUNA

Lacuna is proud to present Lacuna URBAN® - an inward-opening folding door, which has been developed with a unique and an unprecedented, air and water tightness, even for an apartment on the 8th floor with sea views.

Lacuna URBAN® is mainly manufactured in heat-treated beech (durability class 1), but also available in oak or mahogany, all FSC certified. The construction, which is patented/protected design, has a 3-step tightness detail that ensures tightness, good insulation values and an ultra-long durability. Lacuna URBAN® has been thoroughly tested and certified at the Danish Technological Institute.

The product development of Lacuna URBAN® has taken over 5 years as it must live up to the high quality and tightness requirements on equal terms with Lacuna's other folding door solutions. The design is innovative with slim profiles for maximum light. The manufacturing, materials and finishes are of the same high quality as Lacuna's other folding door solutions.

The features of the Lacuna URBAN® make it particularly suitable for apartments with a balcony or Juliette balcony. With Lacuna URBAN®, you get, without problems and rearrangements, full utilization of the balcony area and an opening of as much as 90%, which beautifully connects the outside and inside..

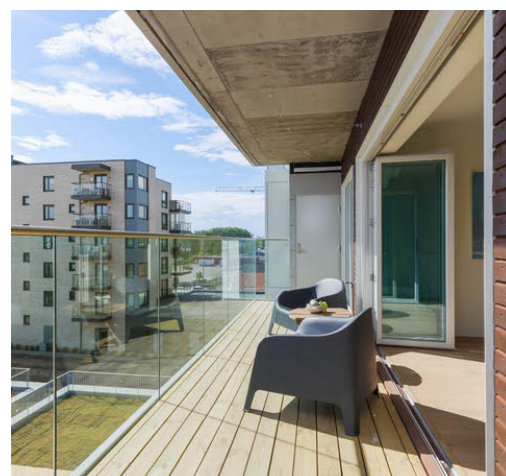

Super insulation, sustainability and long durability are values that are deeply incorporated into Lacuna's DNA. Lacuna is aware that life is lived looking out from the inside. With Lacuna URBAN®, you integrate the apartment into nature. All Lacuna materials are carefully selected with sustainability in mind. Lacuna is passionate about also this aspect of its doors and does not compromise.

Lacuna URBAN® is available with integrated glass balustrade (Lacuna URBAN® French) and for balconies with level-free access.

For Lacuna, LCA, EPD, the Nordic Ecolabel and FSC are completely natural in order to be able to deliver to sustainable construction and projects that work with DGNB, LEED and BREEAM.

FACTS

- Tight, super insulating U-value down to 0.7 and long durability.
- Tested at and certified by the Danish Technological Institute.
